

Inspect
Angles and **Offset** of **Fiber Holes**,
Angles and **Parallelism** of **Guide Holes**
using
True Position™ Fixture

What is special about the True Position™ fixture?

True Position™ fixture from Sumix provides for interferometric scanning from the side perspective and replaces time-consuming procedures carried-out by high-cost stationary equipment (like 3D computed tomography) to ensure the quality of bare MT ferrules and their compliance with the industry standards.

Applications

- For ferrule manufacturers to control and certify geometry of bare ferrules.
- For patchcord manufacturers to perform receiving inspection.

What equipment do I need?

MAX-TP-MT fixture and
MAX-QUANTUM interferometer.
